Languages

Projects

- Planify.al
(Next.js, React, Node.js, MongoDB, Vercel)
Designed and built a comprehensive multi-vendor booking platform for service businesses. Implemented appointment scheduling, staff management, multi-location support, real-time notifications, and analytics dashboard. Integrated Google Maps API, Resend for email, Polar for payments, and Google Auth authentication. Managed database architecture with MongoDB for scalable data handling. Deployed and maintained production application on Vercel.
- Barberspot.al
(JavaScript, React, Node.js, MongoDB)
Developed a specialized booking platform targeting barber shops with intuitive appointment scheduling. Implemented staff management with role-based access control and availability tracking. Created real-time notification system for appointment confirmations and reminders. Integrated SMS and WhatsApp messaging for customer communications. Built analytics dashboard for business performance tracking.
- Online Charging Station Management System
Developed a system for booking and managing electric vehicle charging stations in Albania.

Employment

2021 - 2025

- - Implemented user management, reservation functionality, and database integration.
- **Computer Technician & IT**
 - Delivered technical support for medium-sized and large companies, improving day-to-day IT operations and resolving complex technical issues.
 - Installed, configured, and maintained Windows, macOS, and Linux environments.
 - Diagnosed and resolved hardware, software, and system performance issues efficiently.
 - Performed computer assembly, maintenance, upgrades, and component replacement.
 - Managed backup, recovery, and system restoration processes to protect business data.
 - Provided professional end-user support through effective troubleshooting and communication.

Courses

- **Software Professional Course**
- **IT Hardware Support and IT Operation Systems**
